**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In Claim 4, third line from bottom, the "liquid" should be changed to --liquid crystal--.

In Claim 4, second line from bottom, the symbol "°]" should be deleted.

In Claim 2, line1, the word "composition" should be changed to --composite--.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. The indicated allowability of claim12 is withdrawn in view of the newly discovered reference to US 4,506,956. Rejections based on the newly cited reference follow.

The reference discloses a liquid crystal cell including two transparent, insulating substrates arranged in parallel and each with a confronting surface bearing at least one

Art Unit: 1756

cl 12  
transparent electrode, a layer of nematic liquid crystal material having liquid crystal molecules parallel to the substrates, said layer being contained between the insulating substrates with said liquid crystal molecules being gradually twisted between the substrates, the cell being capable of transmitting light there through in the vicinity of the electrodes upon the application of an electric field across the layer when a potential difference of appropriate magnitude is applied between the electrodes. The reference further discloses that the liquid crystal material has high resistivity ( $> 10^{10}$  ohm cm), which is within the claimed range of the present invention. See col. 3, second paragraph and claim 1. Therefore, the reference anticipates the claimed invention.

5. Claims 8 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by CAPLUS 1987: 449396.

The reference discloses a liquid crystal display device, which has electric field, is parallel to the substrates. The liquid crystal material has a common biphenylnitrile structure. See the abstract. The reference anticipates the claimed invention.

***Allowable Subject Matter***

6. Claims 1, 3, 5-7 and 14-15 are allowed.
7. Claims 10-11 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
